

Australian Equities Strategy

STRATEGY

The JMFG Australian Equities Strategy provides exposure to a diversified portfolio of high quality, Australian listed, large and small companies with sustainable business models and attractive investment fundamentals.

OBJECTIVE

To outperform the S&P/ASX All Ordinaries Accumulation Index over a rolling 3 year period.

WHY JMFG?

When investing in a JMFG Managed Strategy, clients benefit from having their portfolio managed by a professional investment team whilst retaining the value of beneficial stock ownership.

JMFG client investments are individually held in trust by a Custodian, unlike investments in a Unit Trust. Retaining beneficial ownership allows for consideration of clients' individual circumstances, gaining the benefit of franking credits and greater tax planning flexibility.

Portfolios do not inherit realised or unrealised capital gains as may occur with investments in unit trusts. This also allows existing investments to be easily transferred into (and out of) JMFG Managed Strategies without triggering capital gains events.

The client's portfolio will ultimately be invested alongside the model Strategy of their choosing.

INVESTMENT PHILOSOPHY

All JMFG's Strategies are managed in a style neutral fashion with a focus on utilising the team's extensive market experience and knowledge base to outperform in rising markets and limit the downside for our clients in falling markets.

Our investment approach targets companies with strong management and sound business models operating in industries with long term structural growth.

The stock selection process incorporates both macro and sector considerations as well as extensive direct company and senior management contact.

Although we consider all stocks for selection in the Strategy, we seek to position the Strategy towards sectors and companies with an acceptable level of risk given our expected return. As such we have a natural aversion to extremely high risk speculative companies, companies with binary outcomes (such as some biotechs and explorers), companies with unsustainable earnings and companies we believe will be unprofitable for the foreseeable future.

ASSET ALLOCATION

We will typically aim to invest within the following structure:

- S&P/ ASX 200 – 80-100%
- Ex-S&P/ASX 200 – 0-20%

From time to time the Strategy may hold higher or lower percentages than indicated above especially when stocks are moving between the relevant indices.

WHO THE STRATEGY SUITS

The Australian Equities Strategy is tailored towards investors with a high risk tolerance as it will focus on higher growth and lower yielding companies and will hold a portion of small capitalization companies with a higher risk/return profile. Given the combination of both mature and faster growing companies, the Australian Equities Strategy will have some yield and the potential for capital gains and capital losses.

TRANSPARENCY

Our website allows clients easy access to information on their portfolio holdings and transactions.

SUMMARY

Risk Profile	High
Investment Horizon	3 years +
Benchmark	ASX All Ordinaries Accum. Index
Typical Portfolio Composition	80% ASX 200, 20% Ex-ASX 200
