<b>Outperformance</b>	<b>-0.07</b>	<b>-1.00</b>	<b>-11.80</b>	<b>-9.99</b>	<b>-17.39</b>	<b>-1.56</b>

Although the JMFG Leaders Strategy is generally representative of client portfolios, individual performance may differ from the results above. These differences can arise due to various issues, some of which may relate to initial timing of investments, and cash inflows and outflows. Performance is calculated on a TWRR basis after management fees (post 1 Jan 2017), performance fees (paid or accrued), GST, and excludes the effect of franking credits. Strategy Inception for Performance Data is July 1st, 2014.

### Month in Review – A review of the share market and overview of the portfolio for June

The JMFG Leaders Strategy returned 16.00% over the last 12 months, and whilst this performance lagged the benchmark, we feel that some caution is required during the current period of high valuations and extremely low interest rates. Hence, we are carrying more cash than usual, at around 14%.

For June, I.T. was the best-performing sector in the broader market, rising 13.4% for the month. Other strong-performing sectors included Telecommunications +5.6%, Property Trusts +5.5%, Consumer Staples +5.3%, Consumer Discretionary +4.5%, and Energy +4.0%. The worst-performing sector for June was Financials -0.2%, which was also the only sector down for the month. The other weak sectors of the broader market included Materials +0.3%, HealthCare +2.2%, Industrials +3.0%, and Utilities +3.5%.

Larger companies overall underperformed small companies during the month of June. The S&P/ASX 200 Accumulation Index returned 2.26% for the month, trailing the S&P/ASX Small Ordinaries Accumulation Index, which returned a strong 3.08%.

During June, we made some key risk-based adjustments to the portfolio. We reduced holdings in Northern Star on the recent 3-month gold rally ending on news of a strengthening US dollar. We trimmed our holding in Commonwealth Bank to reduce exposure to financials as the market support for the sector turns bearish and CBA had announced plans to divest its general insurance business. We sold out of Appen after examining its recent downgrade news which undermines its otherwise strong market position. At the start of the month, we added Worley to the portfolio after considering its statement of strategic transformation into new energy technologies and services.

The strongest performers for the portfolio during the month included:

- Pro Medicus +27%, Megaport +23%, ResMed +21%, and Worley +13%

The weakest performers for the portfolio during the month included:

- Northern Star -16%, National Australia Bank -2.7%, Westpac Banking Corp -2%, and Nine Entertainment -2%

### Chart of the Month – S&P/ASX 200 Energy Proportion of the S&P/ASX 200

Over a year after going negative, the oil price has recovered substantially, reaching its highest level in three years in recent weeks. Similarly, coal lost ~60% of its value between 2018 and 2020 but has surged almost 200% since bottoming in August last year. However, energy companies continue to shrink as a proportion of the Australian indices. The chart to the left shows the S&P/ASX 200 Energy Index market capitalisation as a proportion of the S&P/ASX 200, illustrating its broad overall decline over 10 years has resumed, despite the recent rallies. To some extent, this can be explained by the fact that a mature industry, such as the energy sector, pays out a substantial amount of its earnings as dividends, while other less mature industries will return fewer dividends and invest more. However, energy has over this time greatly underperformed equally mature sectors, such as banks, which also pay substantial dividends. A more likely explanation for the move is a decreased appetite among investors for coal, oil and gas producing companies.

JMFG Leaders Strategy		S&P/ASX 200 Index	
Best	Worst	Best	Worst
Pro Medicus (PME)	Northern Star (NST)	Altium (ALU)	Nuix (NXL)
Megaport (MP1)	National Australia Bank (NAB)	Afterpay (APT)	Gold Road Resources (GOR)
ResMed (RMD)	Westpac Banking Corp (WBC)	Pro Medicus (PME)	Westgold Resources (WGX)

### Hits & Misses – A summation of the top hits and misses for the month of June

**Pro Medicus (PME)** – up 27% for the month. The radiology information technology and services company signed a multi-year research collaboration agreement with Mayo Clinic to develop and commercialise an AI-based platform. Stock struck new highs early in the month and kept rising through the month.

**Altium (ALU)** – up 30% for the month (Not held). Stock jumped on takeover bid from Autodesk, a bid which was rejected with the company making further announcements about its strategy, goals, and industry transformation vision to illustrate the offer was well under the mark – substantially higher takeover bids may be entertained.

**Northern Star (NST)** – down 16% for the month. During June, the price of gold fell 7.2% from US\$1907 to US\$1770 while the S&P/ASX All Ordinary Gold Index lost 13.0% in value. Northern Star fell in line with other major producers.

**Nuix (NXL)** – down 20% for the month (Not held). Adding to ongoing doubts around Nuix with recent forecast downgrades, Nuix ends the month with a CEO/CFO exit and ASIC commencing insider-trading investigations.

### Due Diligence – A closer look at a stock of interest

#### Uranium Supply and Demand

Since Uranium prices bottomed in late 2016, the spot uranium price has recovered 80% and led to growing interest in the market as to how far prices can continue to rally. Market views on the future of the uranium price are particularly contentious, with strong views on how nuclear energy will play a part in future energy production and where the uranium supply will come from. With Australia having the largest uranium reserves of any country and several large mining companies having some exposure to uranium mining, it is worth understanding the uranium market dynamics and possibilities.

With USA's new president championing a focus on "clean energy", the world increasing 2050 targets for a reduction in carbon emissions, and reaching the tail end of several nuclear weapon disarmament projects that had produced a steady amount of nuclear fuel, many analysts argue that uranium is headed for a squeeze that could send the price soaring as it did in 2007. While the uranium price is now marginally above US\$30/lbs, the price rose to over US\$100/lbs during 2007 before crashing, reflecting what can happen in the event of a squeeze.

Market analysts bearish on uranium look to the low cost of production out of Kazakhstan, as shown below, and the potential for the country to supply substantial amounts of ore below the current spot price. According to the March 2021 Australian Resources and Energy Quarterly Report, Kazakhstan was responsible for 41% of worldwide uranium production and is the lowest-cost producer. Furthermore, there are substantial civil stockpiles worldwide which are gradually being drawn down. Given these substantial inventories, it could be difficult to maintain high uranium prices if uranium consumers begin to draw down more of the civil stockpiles as prices rise. While this drawdown of stockpiles cannot last indefinitely, it could provide time for lower-cost mines to come online and provide supply into any uranium shortage.

Many large Australian miners have exposure to uranium either as a by-product of a mine for another metal or by a separate uranium mining operation. BHP's Olympic Dam is one of the largest copper deposits in the world but is also the largest known uranium deposit which produced 3.7kt of uranium in 2020. Rio Tinto holds a majority stake in Energy Resources of Australia from which it produced 1.3kt of uranium. There are also several smaller listed pure-play uranium miners getting attention with the recent price rises.
